

THE BRITISH
SOCIETY OF
RHEOLOGY

BENEFITS OF MEMBERSHIP

The British Society of Rheology is a registered charity organisation dedicated to raising the awareness of the wonderful science of Rheology (the study of Deformation)

Since its formation in the 1940's the society has had the objectives to promote the science and dissemination of knowledge relating to pure and applied rheology, and has a worldwide membership including many (if not all) of the very top rheologists from the past, present and future.

The society arranges yearly scientific meeting where you can hear the very latest studies in this exciting scientific field, and take the opportunity to mingle and discuss the topics closer to your interest with those presenting or indeed any other members attending. Of course as a member you qualify for a discounted delegate rate.

The society also organises the a more informal Non- Newtonian Club which is a free event to again encourage fellow rheologists from all walks of life and interest to meet and discuss various topics.

Membership also allows full access to our library of rheology publications including a vast array of rheological abstracts and reviews, a very focussed library of information and publications that should cater for any need.

Also included in the membership is access and receipt of the BSR Bulletin, a publication featuring news and reports from many of the most recent conferences around the world, the society and council updates, as well as industrial and education news.

Student who join the BSR are invited to apply for travel awards to help cover the costs of attending a rheologically based conference or meeting anywhere in the world.

The society also holds a yearly competition for the best PhD thesis in rheology, awarding the Vernon Harrison Prize, and the Annual Award is presented to a distinguished rheologist.

So if you are interested in the field of rheology, the British Society provides a varied network and means to gain the knowledge you need.

Membership subscription runs from Oct 1st to Sept 30th at a cost of just £27 per annum.
